WHITEPAPER

The Human Accept Decision

Why proposed definitions must not silently become policy

Automated analysis is valuable precisely because it can propose more changes than a human could draft. That does not mean it should approve them.

More proposals require better acceptance decisions

Automated analysis is valuable precisely because it can propose more changes than a human could draft. That doe approve them.

Agents can identify missing requirements, reclassify a risk, or recommend new authority. These are valuable observ observation automatically overwrites the approved definition, the agent effectively gains policy-making authority th documentation.

> **KEY FINDING**
>
> Automate the preparation of decisions; keep the authority to accept consequential changes wi accountable for them.

An approval click is not informed acceptance

Separate proposal from acceptance to retain a meaningful organizational decision boundary.

The accepting person needs to see what changed, why it matters, and which risks or consequences follow. The syst that decision and preserve the previous baseline. Missing material information should remain visibly unresolved.

Acceptance is not a substitute for executing implementation tasks; a selected mitigation must still be deployed and

Clear scope, visible accountability and known limits make human acceptance substantive.

From payment recommendation to payment execution

> EXAMPLE
>
> An agent proposes to extend an existing workflow from preparing payment recommendations payment instructions. Updating its prose description cannot be allowed to count as approval.

The organization needs an unambiguous distinction between proposed, reviewed, and accepted authority.

The decisive question is not simply whether the agent can carry out the task. It is whether the organization underst the operating arrangement in which it does so.

Stage changes before authorized acceptance

When an agent submits a changed definition, the system needs an accountable identity and a process for handling disputed attribution. Suspicious or inconsistent submissions should not become authoritative simply because they valid.

CARE's registration and merge model allows changes to be staged for review. The precise technical strength of ider depends on the connected setup and should be evaluated accordingly.

AGENT AND AUTOMATION

Prepare descriptions, changes, findings and proposals.

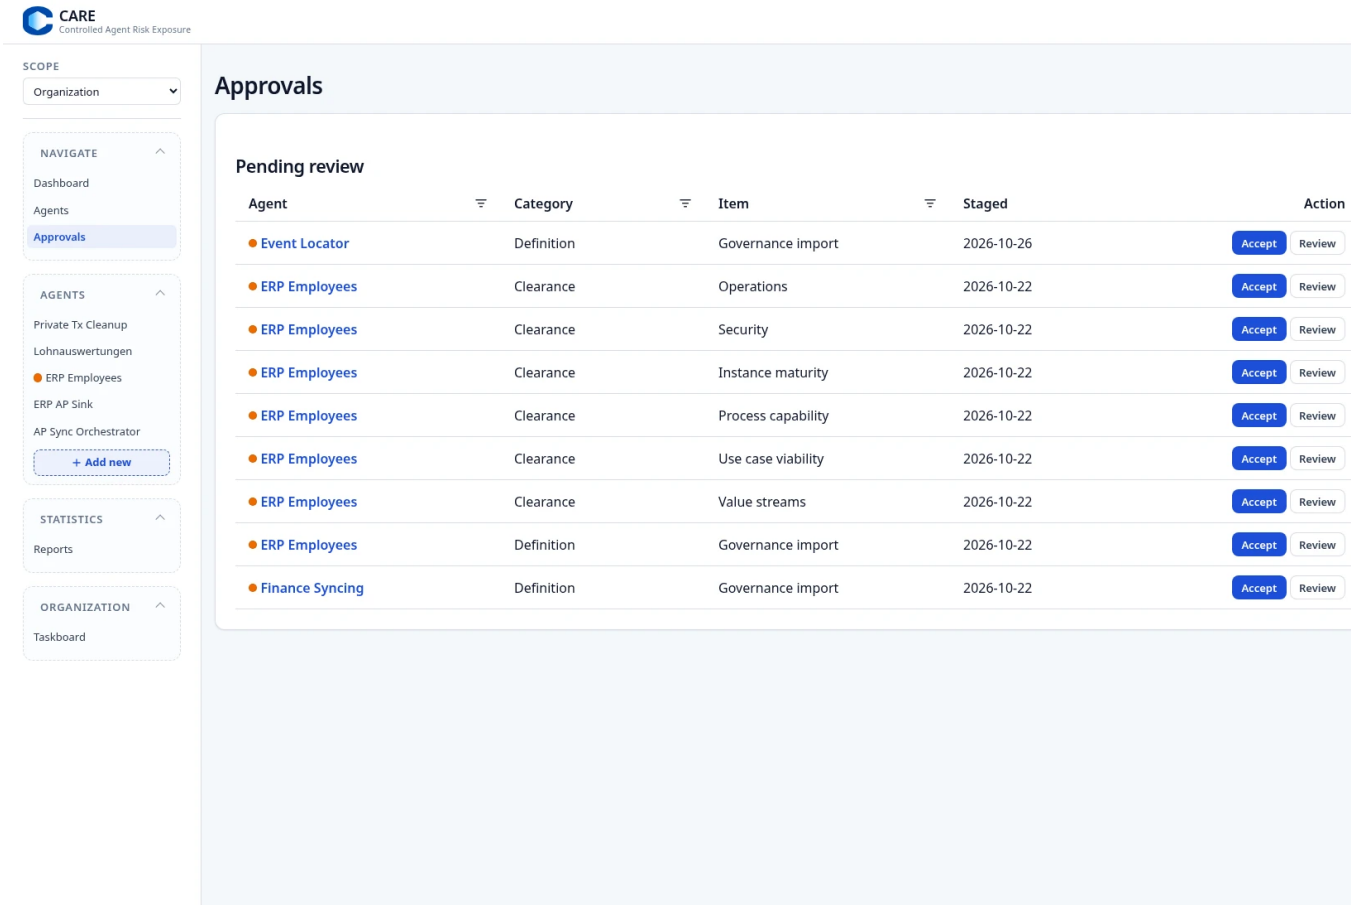

ACCOUNTABLE PEOPLE

Validate context, assess consequ accept decisions.

A staged Merging process separates automated preparation from authorized acceptance and retains the record of

Observed CARE pending-import approval for Finance Syncing: an ingestion waiting for approval with a field-by-field C comparison (Accept/Discard not actioned in this capture).

An accept button is useful only when it conveys a specific decision. Prioritize material changes, summarize differenc unresolved risks. Requiring approval for harmless formatting edits adds cost without strengthening authority.

Organizations should define categories of changes that require acceptance and those that can be automatically har previously accepted rule.

> **MANAGEMENT IMPLICATION**

> The organization needs an unambiguous distinction between proposed, reviewed, and accepte

Make material differences visible to decision-makers

Use this comparison to distinguish the current operating habit from the management capability the organization n

Stage	Control question
Proposal	What is being suggested and by whom?
Review	What changes in purpose, exposure, or responsibility?
Accept	Who authorizes the new baseline?

Use the comparison to test one real agent rather than discussing an abstract enterprise-wide target state. Where th unknown, record that uncertainty and assign responsibility for resolving it.

Acceptance is an explicit management relationship, not a ceremonial signature.

Acceptance means assuming responsibility

Acceptance must represent an informed decision, not a ceremonial click. The authorized owner understands the pr

Automate the preparation of decisions; keep the authority to accept consequential changes wit accountable for them.

The first practical improvement is to create one current, accountable record and use it to make a better manageme scalable system follows when that discipline is repeated across agents and maintained as conditions change.

Start with one agent

Use a real agent and review what it produces.

1. the agent to https://ai-managementsystem.com/under-care.
2. it is finished, log into CARE and review its documentation.
