CARE

WHITEPAPER

An Approval Is Not an Approval Until You Know What Was Approved

Specific authorization reduces the gap between intent and system-side execution.

Control begins with a clear distinction between preparation, permission and accountable human decision.

A yes is meaningless without a referent

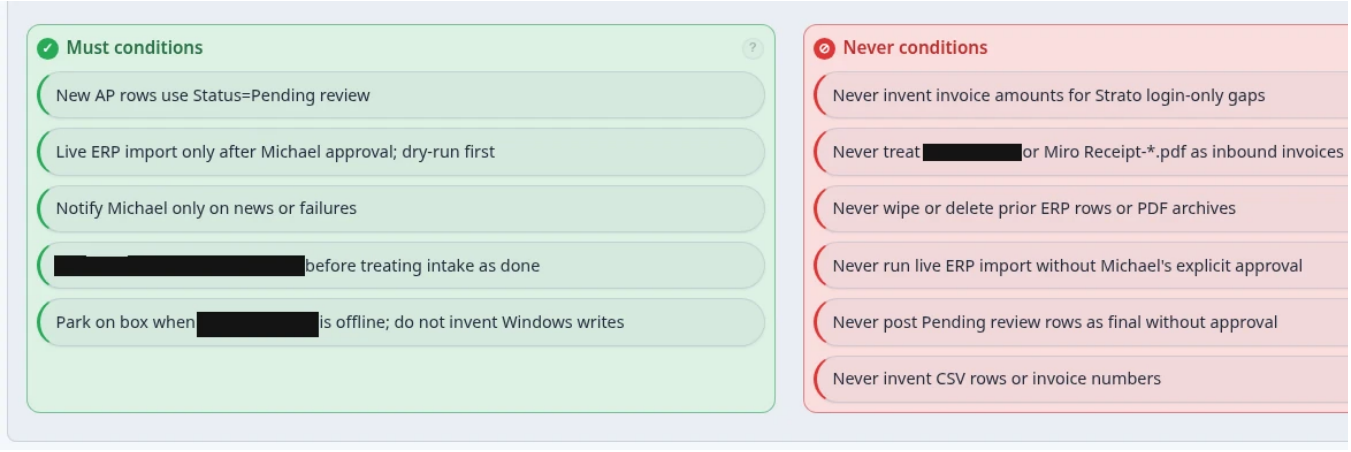

When an agent requests permission to import financial rows, approval must be tied to the objects and operation b casual affirmative may refer to the dry-run report, one invoice, or an unrelated conversation. The AP incident demo consequence of ambiguity.

Observed CARE pending-import approval for Finance Syncing: an ingestion waiting for approval with a field-by-field C comparison (Accept/Discard not actioned in this capture).

Define the approval object

CARE's rules require named-row approval in the owner's own chat and reject approval relayed or quoted by anothe improvement goes further: echo the exact rows immediately before live write and receive a clear yes to that list. Th then be compared to the rows accepted.

Observed CARE business rules: Must conditions such as Status=Pending review and dry-run before live ERP import, an such as never inventing invoice amounts or running live import without explicit approval.

Separate discussion from authority

Agents can summarize, advise and prepare changes without gaining permission to execute them. Approval must oc designated decision point. When two instructions conflict, the agent should ask rather than select the interpretatio for execution.

What the business retains

An accountable owner defines the authorization channel and the acceptable control strength. For consequential tra logging and technical write restrictions may also need enforcement outside CARE. The documented rule becomes t baseline those measures should implement.

> **MANAGEMENT IMPLICATION**
>
> Management takeaway: retain the decision and verify the operating evidence before treating a delivered control.

What management can verify

Checkpoint	Management question	Evidence to request
Object	Identify precisely which rows or records	No blanket yes to unspecifie
Identity	Check whose decision authorizes the write	Owner channel defined
Alignment	Check execution matches scope	Written rows equal accepte

Where evidence is missing, record the gap and the accountable owner rather than treating the document itself as p

Start with one agent

Use a real agent and review what it produces.

1. F the agent to https://ai-managementsystem.com/under-care.
2. W it is finished, log into CARE and review its documentation.
